

Docker Installation

Installation

Launch AWS windows server 2019 as container instance

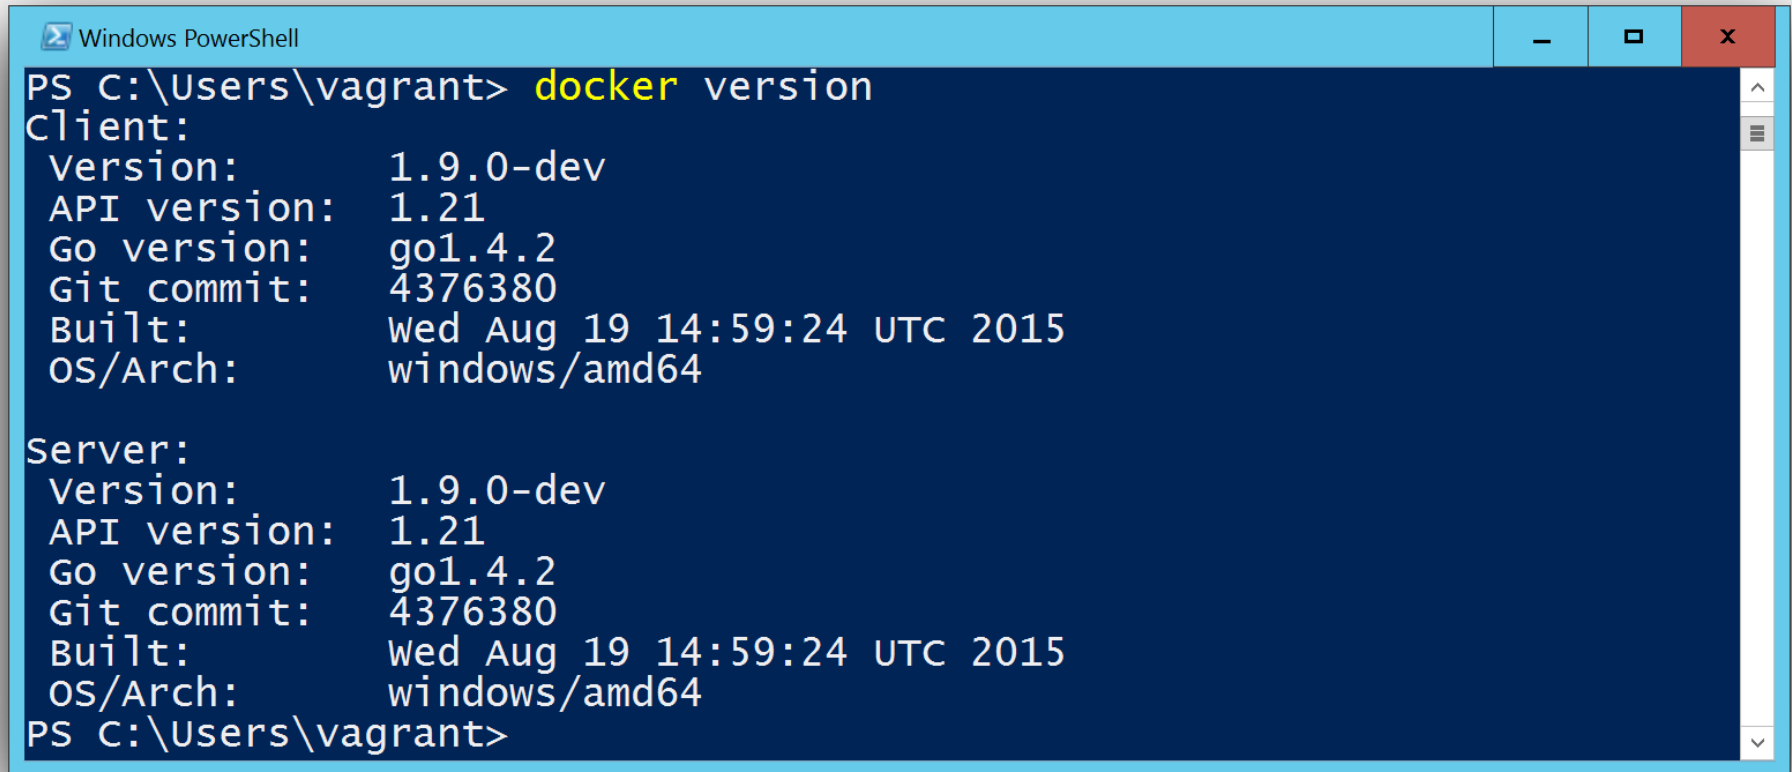

- Open PowerShell (Run as Administrator) command prompt, and type the following commands:
- *Install-Module DockerMsftProvider -Force*
- *Install-Package Docker -ProviderName DockerMsftProvider -Force*

After the Docker is successfully installed, you should restart the server with the **Restart-Computer -Force** command.

Docker Installation Check

Open Power Shell as admin

docker version

A screenshot of a Windows PowerShell window titled "Windows PowerShell". The window has a blue title bar with standard Windows window controls (minimize, maximize, close). The background is dark blue, and the text is white. The command "docker version" has been executed, and the output is displayed in two sections: "Client:" and "Server:". Both sections show the same information: Version: 1.9.0-dev, API version: 1.21, Go version: go1.4.2, Git commit: 4376380, Built: wed Aug 19 14:59:24 UTC 2015, and OS/Arch: windows/amd64. The prompt "PS C:\Users\vagrant>" is visible at the top and bottom of the terminal area.

```
Windows PowerShell
PS C:\Users\vagrant> docker version
Client:
Version:      1.9.0-dev
API version:  1.21
Go version:   go1.4.2
Git commit:   4376380
Built:        wed Aug 19 14:59:24 UTC 2015
OS/Arch:      windows/amd64

Server:
Version:      1.9.0-dev
API version:  1.21
Go version:   go1.4.2
Git commit:   4376380
Built:        wed Aug 19 14:59:24 UTC 2015
OS/Arch:      windows/amd64
PS C:\Users\vagrant>
```

Available Packages for Windows

microsoft/dotnet
microsoft/mssql-server-linux
microsoft/aspnet
microsoft/windowsservercore
microsoft/aspnetcore
microsoft/nanoserver
microsoft/iis

microsoft/cntk-nightly

Docker Operation

Downloading image

- 1) `docker pull mcr.microsoft.com/windows/servercore:ltsc2019`
- 2) `docker pull mcr.microsoft.com/windows/nanoserver:1809`
- 3) `docker pull mcr.microsoft.com/windows/servercore:ltsc2016`
- 4) *docker pull mcr.microsoft.com/windows/servercore:1903*

To check all downloaded images

5) *Docker images*

To run the container

`docker run -it -d mcr.microsoft.com/windows/servercore:ltsc2019`

docker ps

docker exec -it cont:id powershell

Running IIS web server in docker container

1) `docker run -it -p 82:80 -d mcr.microsoft.com/windows/servercore:ltsc2019`

2) `docker ps`

3) `docker exec -it cont:id powershell`

Now container will open

Install webserver (IIS)

4) `Install-WindowsFeature -name Web-Server -IncludeManagementTools`

5) Go to `c:\inetpub\wwwroot\` and create one html file here

a) `new-item deepak.html` :--creating new file

b) `set-content deepak.html` :---Adding content on this file

c) `get-content deepak.html` :---To check the added content

d) `notepad.exe deepak.html` : to edit the file

Now go to AWS console –copy Public IP of Instance and paste in browser(
publicip:82) -----Enjoy the output

Docker Bind mount

1) `docker run -it -v d:\storage1:c:\app1 -p 83:80 -d iisimage`

4) *Docker ps*

5) *docker exec -it cont:id powershell*

Now Container will open

6) *ls*

7) *cd app1*

Create some files and folder here

a) `new-item deepak.html` :--creating new file

b) `set-content deepak.html` :---Adding content on this file

c) `get-content deepak.html` :---To check the added content

d) *new-item india1 -itemtype directory*

Now open one more container and mount same directory and check the data

Docker Volume

- 1) Docker volume create test1
- 2) Docker volume ls
- 3) docker run -it --mount source=test1,target=c:\app1 -p 83:80 -d iisimage
- 4) *Docker ps*
- 5) *docker exec -it cont:id powershell*

Now Container will open

- 6) *ls*
- 7) *cd app1*

Create some files and folder here

- a) new-item deepak.html :--creating new file
- b) set-content deepak.html :---Adding content on this file
- c) get-content deepak.html :---To check the added content
- d) *new-item india1 -itemtype directory*

Now open one more container and mount same volume and check the data

Docker File

- 1) New-item dockerdir -itemtype directory
- 2) Cd dockerdir
- 3) New-item dockerfile
- 4) Notepad.exe dockerfile

```
FROM mcr.microsoft.com/windows/servercore:ltsc2019
RUN powershell -Command Add-WindowsFeature Web-Server;
WORKDIR /inetpub/wwwroot
COPY content/ .
EXPOSE 80
```

- 3) *Create one folder (content) and keep all .html file here*
- 4) *Docker build . -t iisimage*
- 5) *Docker images*
- 6) *Docker run -it -p 83:80 -d iisimage*

Docker Compose

Same as Linux

Docker Swarm

Same as Linux
